

Create a Web Application in Netbeans (using Tomcat as the server) and add an *index.jsp* page to the project. Netbeans will automatically add an *index.html* page to the project but you can delete this. Within the index page create a form that matches the screen grab below. This form allows users to register their personal details with the site.

Please Send Us Your Details.

Name: Terry Formby

Address: 123 Fake St

City: Cork

Country: Ireland

Phone: 0867732765

Email: tf@gmail.com

Gender: ☒ Male ☐ Female

How Did You Hear About Us? ☒ Twitter ☐ Facebook ☐ Newspaper ☐ Radio ☐ Other ☐

Comments: Great site!

Submit Clear

Fig 1. Index page for the application.

When the form is submitted, a JSP is called that acknowledges the users submission of the form and provides a link so that the user can review the details that they submitted. You must write this JSP. A screen-grab of what it might look like is shown below.

Thanks

Click [here](#) to view your details again

Fig 2. Confirmation Page.

When the user clicks on the link, a JSP is called that displays the details that the user entered into the original form. You must also write this JSP. A screen-grab of what it might look like is shown below. This page provides two buttons (implement them as links if you like).

Details Confirmed

Edit Details

Save Details

Fig 3. Page to allow the user to view their details again.

One button (“Edit Details”) will return the user to the index page where the form will once again be presented to the user, however it will be populated with the user’s data. From there they can edit their details should they wish to.

Submit Clear

Fig 4. Index page redisplayed with the users original input.

If the user clicks on the second button (“Save Details”) from the “Details Confirmation Page” the user’s details will be saved to a file and a “thank you” page will be displayed.

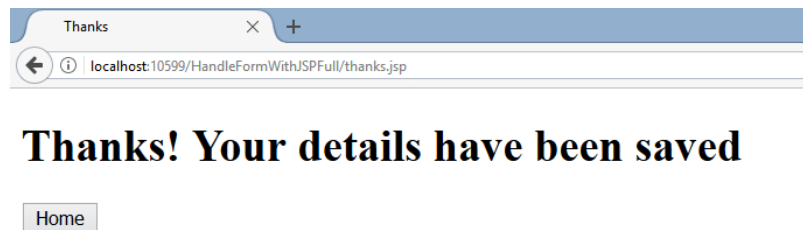

Fig 5. Thanks Page

From the “thank you” page, the user will be afforded the option to go HOME (the index page). Should the user click on this button, the index page will again be displayed, but the fields within the form should be empty.
